### **Buoyancy test of the PLT Rescue Buoy**

We have tested one test specimen of your PLT Rescue Buoy with respect to buoyancy. The test was performed in accordance with the procedure described in European Standard EN 393 "Lifejackets and personal buoyancy aids – buoyancy aids – 50 N", annex B. The buoyancy of the device was measured immediately after inflating the buoy from the CO<sub>2</sub> cartridge. We did not measure the buoyancy after 24 hours of immersion, as this was considered unnecessary for this kind of device.

We measured a buoyancy of 155 N which according to EN 393 is sufficient for persons with a weight over 70 kg (the minimum required buoyancy is 50 N).

Yours sincerely,  
for Thelma AS

  
Olav Eftedal  
Senior Engineer
